

Find the coordinates of point P along the directed line segment AB so that the ratio of AP to PB is 3 to 2.

SOLUTION

In order to divide the segment in the ratio 3 to 2, think of dividing, or *partitioning*, the segment into $3 + 2$, or 5 congruent pieces.

Point P is the point that is $\frac{3}{5}$ of the way from point A to point B .

Find the rise and run from point A to point B . Leave the slope in terms of rise and run and do not simplify.

$$\text{slope of } \overline{AB}: m = \frac{8 - 2}{6 - 3} = \frac{6}{3} = \frac{\text{rise}}{\text{run}}$$

To find the coordinates of point P , add $\frac{3}{5}$ of the run to the x -coordinate of A , and add $\frac{3}{5}$ of the rise to the y -coordinate of A .

$$\text{run: } \frac{3}{5} \text{ of } 3 = \frac{3}{5} \cdot 3 = 1.8$$

$$\text{rise: } \frac{3}{5} \text{ of } 6 = \frac{3}{5} \cdot 6 = 3.6$$

► So, the coordinates of P are

$$(3 + 1.8, 2 + 3.6) = (4.8, 5.6).$$

The ratio of AP to PB is 3 to 2.

Find the coordinates of point P along the directed line segment \underline{AB} so that AP to PB is the given ratio.

1. $A(1, 3), B(8, 4)$; 4 to 1

$P(6.6, 3.8)$

2. $A(-2, 1), B(4, 5)$; 3 to 7

$P(-0.2, 2.2)$
