### Lesson 1.3 Using Distance and Midpoint Formulas

**Learning Intent (Target):** *Today I will* be able to describe and determine the midpoint and distance between two points on the coordinate plane.

**Success Criteria:** *I'll know I'll have it when* I'll be able to use the formulas to solve and prove the distance & midpoint of line segments on the coordinate plane.

**Accountable Team Task:** *Therefore, I can* prove the distance and midpoint formulas using interactive flip charts, desmos, foldables, and gizmos activities.

## Core Concept

### Midpoints and Segment Bisectors

The **midpoint** of a segment is the point that divides the segment into two congruent segments.

$M$  is the midpoint of  $\overline{AB}$ .

So,  $\overline{AM} \cong \overline{MB}$  and  $AM = MB$ .

A **segment bisector** is a point, ray, line, line segment, or plane that intersects the segment at its midpoint. A midpoint or a segment bisector *bisects* a segment.

$\overleftrightarrow{CD}$  is a segment bisector of  $\overline{AB}$ .

So,  $\overline{AM} \cong \overline{MB}$  and  $AM = MB$ .

## Core Concept

### The Distance Formula

If  $A(x_1, y_1)$  and  $B(x_2, y_2)$  are points in a coordinate plane, then the distance between  $A$  and  $B$  is

$$AB = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2}.$$

## Core Concept

### The Midpoint Formula

The coordinates of the midpoint of a segment are the averages of the  $x$ -coordinates and of the  $y$ -coordinates of the endpoints.

If  $A(x_1, y_1)$  and  $B(x_2, y_2)$  are points in a coordinate plane, then the midpoint  $M$  of  $\overline{AB}$  has coordinates

$$\left( \frac{x_1 + x_2}{2}, \frac{y_1 + y_2}{2} \right).$$

In the skateboard design,  $\overline{VW}$  bisects  $\overline{XY}$  at point  $T$ , and  $XT = 39.9$  cm. Find  $XY$ .

In the skateboard design,  $\overline{VW}$  bisects  $\overline{XY}$  at point  $T$ , and  $XT = 39.9$  cm. Find  $XY$ .

### SOLUTION

Point  $T$  is the midpoint of  $\overline{XY}$ . So,  $XT = TY = 39.9$  cm.

$$XY = XT + TY$$

$$= 39.9 + 39.9$$

$$= 79.8$$

Segment Addition Postulate  
(Postulate 1.2)

Substitute.

Add.

► So, the length of  $\overline{XY}$  is 79.8 centimeters.

Point  $M$  is the midpoint of  $\overline{VW}$ . Find the length of  $\overline{VM}$ .

### SOLUTION

**Step 1** Write and solve an equation. Use the fact that  $VM = MW$ .

$$VM = MW$$

Write the equation.

$$4x - 1 = 3x + 3$$

Substitute.

$$x - 1 = 3$$

Subtract  $3x$  from each side.

$$x = 4$$

Add 1 to each side.

### Check

Because  $VM = MW$ , the length of  $\overline{MW}$  should be 15.

$$MW = 3x + 3 = 3(4) + 3 = 15 \quad \checkmark$$

**Step 2** Evaluate the expression for  $VM$  when  $x = 4$ .

$$VM = 4x - 1 = 4(4) - 1 = 15$$

► So, the length of  $\overline{VM}$  is 15.

3. Identify the segment bisector of  $\overline{PQ}$ .  
Then find  $MQ$ .

line  $\ell$ ; 7

4. Identify the segment bisector of  $\overline{RS}$ .  
Then find  $RS$ .

line  $n$ ; 66
