

Module 3 Review (Quiz Grade)

* Required

* This form will record your name, please fill your name.

1

Determine if the following equations are parallel, perpendicular, or neither:
 $y=5$ and $y = -3$ * (1 Point)

- ☐ Parallel
- ☐ Perpendicular
- ☐ Neither

2

Determine if the following equations are parallel, perpendicular, or neither:
 $y = 3x - 2$ and $y - \frac{1}{3} = 4(x-6)$ * (1 Point)

- ☐ Parallel
- ☐ Perpendicular
- ☐ Neither

3

Determine if the following equations are parallel, perpendicular, or neither:
 $y + 5 = 3(x-2)$ and $y = -\frac{1}{3}x + 8$ * (1 Point)

- ☐ Parallel
- ☐ Perpendicular
- ☐ Neither

4

Determine if the following equations are parallel, perpendicular, or neither:
 $y - 2 = -4(x + 1)$ and $y + 1 = -4(x + 9)$ * (1 Point)

- ☐ Parallel
- ☐ Perpendicular
- ☐ Neither

5

Determine if the following lines are parallel, perpendicular, or neither:
AB if point A is at $(-4, 4)$ and B $(8, 8)$ and CD if C is at point $(-2, 8)$ and D $(2, -4)$
* (1 Point)

- ☐ Parallel
- ☐ Perpendicular
- ☐ Neither

6

Which line segment is skew to line segment BC? * (1 Point)

☐ AD

☐ AE

☐ BE

7

Which line segment is parallel to line segment BC? * (1 Point)

☐ AD

☐ AE

☐ BE

8

Which line segment is intersecting to line segment BC? * (1 Point)

☐ AD

☐ AE

☐ BE

9

Point C is the midpoint of AB. Point B is between points A and D. If $AD=20$ and $BD = 12$, what is the length of CD? * (1 Point)

10

What is the value of x ? *

(1 Point)

11

What is the value of the each angle?

*Just put one answer since they are the same degrees. *

(1 Point)

What kind of angles are angle 2 and 3? * (1 Point)

- ☐ Consecutive Interior Angles
- ☐ Alternate Interior Angles
- ☐ Corresponding Angles
- ☐ Alternate Exterior Angles

What is the measure of angle 3? * (1 Point)

What kind of angles are angle 2 and 4? * (1 Point)

- ☐ Consecutive Interior Angles
- ☐ Alternate Interior Angles
- ☐ Corresponding Angles
- ☐ Alternate Exterior Angles

What is the measure of angle 4? * (1 Point)

16

Write the equation of a line in slope-intercept form ($y=mx+b$) of a line perpendicular to $y=-\frac{1}{2}x+3$ going through point $(-3,-2)$.

*Do not use any spaces in your answer it should be in the format of $y=mx+b$ *
(1 Point)

17

Write the equation of a line (in slope intercept form $y=mx+b$) that is parallel to the line $y=x+2$ that passes through the point $(-3,2)$.

*Do not use any spaces in your answer it should be in the format of $y=mx+b$ *
(1 Point)

18

What is the shortest distance between the line $y=3x+1$ and the point $(6, -1)$. Round to the nearest hundredth.

*Also make sure you know how to simplify the original square root (radical) answer. * (1 Point)

What is the distance between these parallel lines? Round to the nearest tenths place.

*Also know how to simplify the answer in simplest radical form. * (1 Point)

True or False: When completing Proofs the very first step is the information from what is "Given" and the last step is always what it is being asked to prove.

*Make sure to know the following information for the test when completing proofs: complementary, supplementary, angle addition, definition of a straight angle, definition of a right angle, substitution property, linear pair, transitive property, definition of congruence, midpoint theorem, subtraction and division property. * (1 Point)

☐ True

☐ False
