

Triangle Inequality Exploration

$$7+10=17>12 \quad 7+12=19>10 \quad 12+10=22>7$$

*the sum of two sides of a triangle must always be greater than the third

Can you make a triangle with the
3 known side lengths?

Move the colored points above
to adjust the side lengths.

Move the yellow points to move the two free sides to try and form a triangle.

NOT A TRIANGLE – WHY? $7+5=12=12$ THE TWO SIDES
ARE EQUAL TO THE THIRD SIDE NOT GREATER THAN.

NOT A TRIANGLE? $3+2=5$ $5 < 8$ THE SUM OF THE TWO
SIDES ARE LESS THAN THE THIRD SIDE!
